

My class is answering Robbie's "Long Call" of the wild. Bring used cell phones and aluminum cans to school.

Long Call of the Wild

Orangutans communicate by long calling. A long call can be heard miles away. Robbie needs you to call all your friends and help his fellow apes by donating used cell phones. Phones collected will go to the RHWA Green Team and Orangutan conservation.

Did you know?

Cell phones use a mineral called coltan that is mined from the mountains where Gorillas live? You may not have even heard of coltan, but you have it in your cell phone as well as laptops, pagers and other electronic devices. It is important to everyday communication in the United States, but it is making the conflict in Congo more complicated.

Environmental Consequences

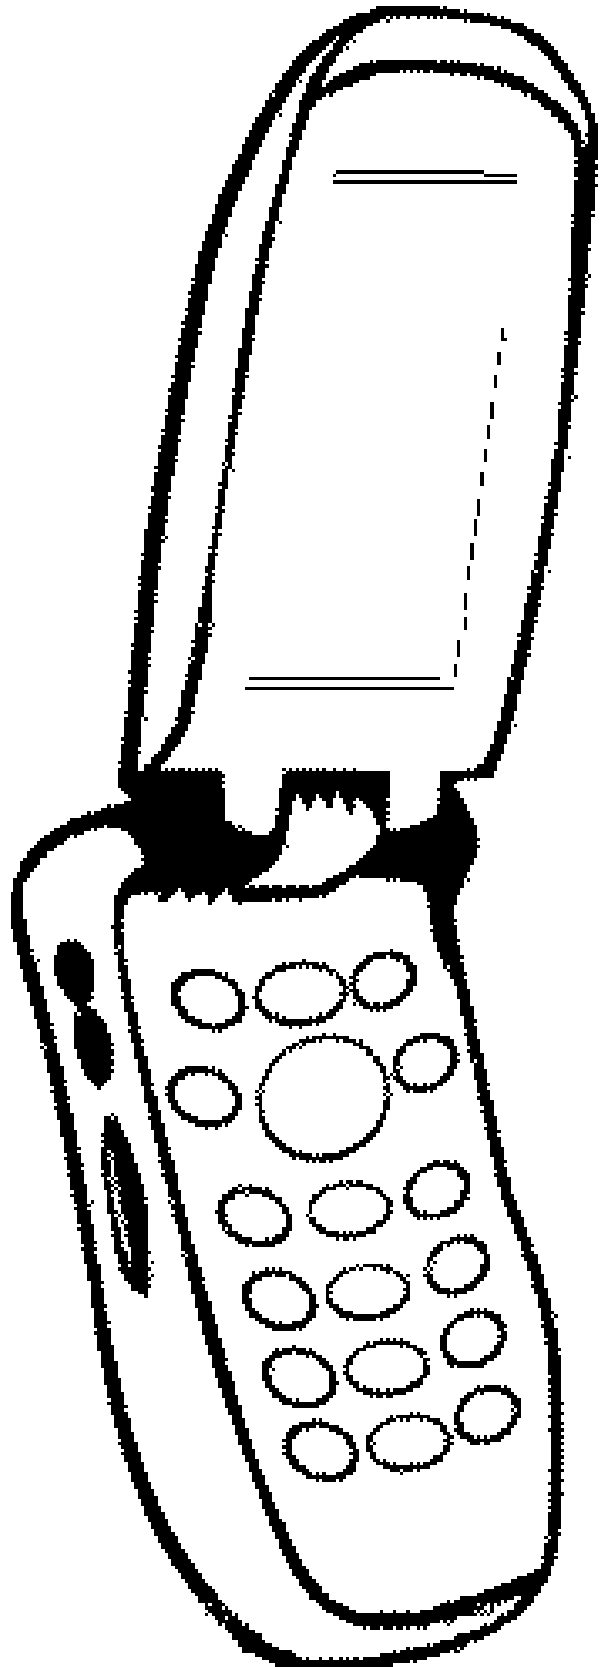

In order to mine for coltan, rebels have overrun Congo's national parks, clearing out large chunks of the area's lush forests. In addition, the poverty and starvation caused by the war have driven some miners and rebels to hunt the parks' endangered elephants and gorillas for food.

Let's keep this sought after resource out of the landfills.

All phones collected are recycled as a fundraiser for the Rolling Hills Wildlife Adventure Green Team.

25% of all funds collected will be donated to the Orangutan Conservancy.
